## DETAILED ACTION

### Examiner's statement of reason of allowance

1. Claims 1-4, 6-8, and 13-14 are allowed.
2. The following is an examiner's statement of reasons for allowance: the present invention relates to information processing apparatus, more particularly to an information processing apparatus capable of properly measuring a time take to reach communication partner. Independent claims 1,3,4,6, 13 and 14, recites the uniquely distinct features of “communication interface configured to transmit a second response request command to the data receiving apparatus after receiving the first response message from said data receiving apparatus, the second response request command including third authentication data generated based on the shared data, and receive a second response message to the second response request command from the data receiving apparatus, said second response message containing fourth authentication data generated at the data receiving apparatus based on the shared data and a second sequence number included in the second response request command indicating a position of the second response request command in the sequence of response request command to be transmitted by the command transmission unit; and authentication unit configured to produce an authentication result for said data receiving apparatus based on the fourth authentication data included in the second response message; a measurement unit configured to measure a

Art Unit: 2437

response time between transmitting the second response request command and receiving the second response message; and a judgment unit configured to judge if a subsequent data transmission to said data receiving apparatus is granted based on the authentication result and the response time”.

3. The closest prior art,

a ) Heard et al (US 2006/0236363), discloses a conventional system for establishing a mutual challenge response that uses a shared key as a shared secret for determining authentication.

b) Dal Canto et al (US 20030217166), discloses a system for providing remote access to digital service over a communication network, calculate a response time and authenticate the client.

c) Jaisimha et al ( US 6487663), discloses a media server sends an authentication challenge to media player to determined that the media player is compatible with the media server based on the calculation of the expected response from the media player.

d) Patel (US 6591364), discloses a conventional system for establishing a session key and performing mutual authentication based on codes.

Those prior arts fail to anticipate or render the above underlined limitations obvious for claims 1,3,4,6, 13 and 14.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should

Art Unit: 2437

preferably accompany the issue fee. Such submissions should be clearly labeled

“Comments on Statement of Reasons for Allowance.”
